

HACC 2023 Google AI/ML Workshop

Daniel Liu
AskDaniel@google.com

Google AI Mission Statement

Google AI is focused on bringing the benefits of AI to everyone.

We do this through research that advances the state-of-the-art in the field, efforts to apply AI to Google products and to new domains, and by developing tools to ensure that everyone can access AI.

Google AI

Google

“Machine learning is a core, transformative way by which we’re rethinking how we’re doing everything.”

- Sundar Pichai, Google, 2016

What is **AI**?

AI is a bigger concept to create intelligent machines that can simulate human thinking capability and behavior

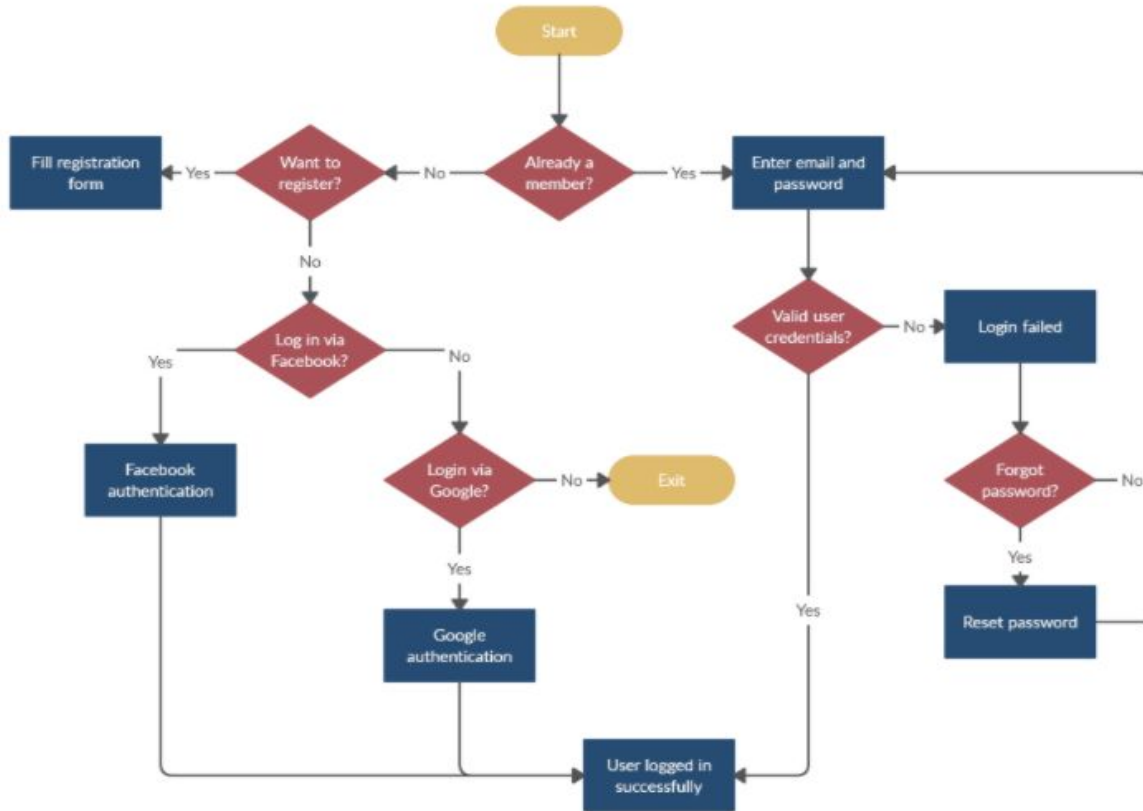

Machine Learning is a specific field of AI where a system learns to find patterns in examples in order to make predictions.

Computers learning how to do a task
without being explicitly programmed to
do so.

Explicitly Programmed (Flowchart)

```
if ($a > $b) {  
    echo "a is bigger than b";  
} elseif ($a == $b) {  
    echo "a is equal to b";  
} elseif (...) {  
    echo "...";  
} elseif (...) {  
    echo "...";  
} elseif (...) {  
    echo "...";  
} else {  
    echo "a is smaller than b";  
}
```

Machine Learning Allows You to Solve a Problem Without Codifying the Solution

Google Cloud AI

Demo

paintings by using geometry. Several Renaissance scholars had developed theories of perspective, the presentation of three-dimensional objects on a two-dimensional surface, but Leonardo improved upon existing theories by Brunelleschi and Alberti, and his paintings became study pieces for the artists of his day. His scientific approach to art was in part an effort to persuade others that painting should be considered at the level of the liberal arts, i.e. rhetoric, philosophy, mathematics, poetry, etc. What is more scientific,

he reasoned, than being able to see and to project what one sees onto a flat surface?

As Leonardo moved from Milan, to Venice, and finally France, he used his ability as an artist and inventor to gain access to the highest levels of power and wealth. His ability to cultivate wealthy and influential patrons of his work was a key factor in his remarkable career.

Renaissance Italy

The Renaissance, or rebirth, of Europe beginning in the 15th century was a time of great opportunity and achievement in culture, exploration, and the accessibility of knowledge. In Italy, wealthy ruling families such as the Medicis commissioned great works of art and architecture. Masterpieces like the Sistine Chapel remind us today of the great achievements of this time. Explorers such as Columbus and Magellan set out on voyages to lands and cultures unknown to Europeans at that time. They established contact and trade with cultures across the globe and made an unprecedented variety of goods from India, central Asia, and the Far East available.

Prior to the advent of the printing press in the late Middle Ages, books were hand-written by monks, one at a time. Information and knowledge was available only to those who had the wealth to obtain monastic manuscripts. Printed books were a crucial catalyst for the Renaissance, resulting in the publication and dissemination of classical texts and works by contemporary authors. Each successive generation grew increasingly literate due to the speed and availability of knowledge. Use of the vernacular languages (as opposed to Latin) increased, resulting in more books that could be read by literate, and not only learned people.

Scientific knowledge became accessible to many more people through books; this ability to

share information also provided an opportunity for rebuttal and exchange of ideas. Leonardo carefully analyzed the approximately 116 books he owned and recorded his response and disagreements with them in his notebooks. For Leonardo, the most reliable source of knowledge was his own observation.

Machine Translated by Google

आपकी का उपरोक्त कथने की। कई इंग्लिश-भाषी विद्वानों में परिचय के सिद्धांत विकसित किए थे, जो आमतौर पर त्रि-आयामी वस्तुओं की दृश्यता, अर्थात् त्रि-आयामी में प्रदर्शित की गई वस्तुओं को दो-आयामी सतह पर प्रदर्शित करने में सक्षम थे।

उपरोक्त कथने में सक्षम होने के बजाय।

जैसे ही विद्योत्सवों विमान से उड़ान और नौ प्रवास वाले पक्ष, उन्होंने एक काल्पनिक और आधुनिकता के रूप में अपनी क्षमता का उपयोग उपकरण बन की दृष्टि और एक नया दृष्टिकोण प्रदान करने के लिए किया। अपने काम के पुराने और नवजातों संश्लेषण दिए करने के उनकी क्षमता उनके उत्प्रेरणात्मक और एक महत्वपूर्ण कारक थी।

अधिक वैज्ञानिक बन है।

पुस्तकालय द्वारा 15वीं सदी में शुरू

दूसरा यूरोप का पुनरुत्थान, या पुनरुत्थान, संस्कृति, अर्थशास्त्र और ज्ञान की युद्ध में महान अवसर और उत्प्रेरणा का समय था। 15वीं सदी में, मॉडर्निजेशन जैसे पुराने संरचना परिवर्तनों में ज्ञान और संस्कृति के महान स्रोतों को सज्ज किया। प्रिंटिंग प्रेस जैसे उच्च तकनीकी उपकरणों का उपयोग करने की महान उपस्थिति की शक्ति दिखाती है। कोशिका और कोशिका जैसे कोशिकाओं का समय यूरोपीय लोगों के लिए अज्ञान भ्रम और संस्कृति की शक्ति पर विचार था; उन्होंने प्रेरणा भर में संस्कृति के साथ संदर्भ और वास्तविकता दिखाए और समय, नया प्रयोग और युद्ध शुरू के सफलता की एक अनुभूति विकसित उपकरण बन गई।

आपकी क्षमता करने से संसार और विचारों के अज्ञान प्रदान का अवसर थी किताबें विकसित करने के बजाय सक्षम बनी। 116 पुस्तकों का सामान्यतः प्रिंटिंग प्रेस और पुराने लेखकों में उनके समय अपनी प्रतिक्रिया और अनुभूति दर्शाती थी। विद्योत्सवों के लिए, ज्ञान का सबसे विकसित और उपकरण अज्ञान अज्ञानता का।

प्रिंटिंग प्रेस के अभाव में पुस्तकें बनाए गए थे, किताबें प्रिंटिंग द्वारा ही प्रिंट की जाती थीं, एक समय में एक पुस्तक और ज्ञान केवल उन्हीं के लिए उपलब्ध था जिन्होंने पास रखी थी। प्रिंटिंग प्रेस का उपयोग करने के लिए एक महत्वपूर्ण उपकरण था, जिसके परिणामस्वरूप संचालित लेखकों द्वारा संचालित करने और कार्यों का प्रकाशन और प्रसार द्वारा ज्ञान की गति और उपलब्धता के कारण उनके जीवन की गति में सकारण हुई। संचालित भाषाओं का उपयोग (प्रिंटिंग के सिद्धांत) में प्रिंटिंग हुई, जिसके परिणामस्वरूप अधिक पुस्तकें पढ़ी जा सकती थीं, जिन्होंने पढ़-लिखे लोग ही पढ़ सकते थे।

पुस्तकों के अभाव में वैज्ञानिक ज्ञान बढ़ा और लोगों तक पहुंचा; करने की यह क्षमता

- (75) **ABSTRACT**
- A time-of-flight camera system is described. The time-of-flight camera system includes an illuminator to illuminate a region within the time-of-flight camera system's field of view. The time-of-flight camera system includes an image sensor to receive optical signals from the illumination for determining depth profile information within the field of view using time-of-flight measurement techniques. The image sensor has circuitry to determine one or more regions within the field of view where a received optical signal from the illuminator was weak. The illuminator is also to re-illuminate the one or more regions with stronger light than the one or more regions received during the illuminating. Each of the one or more regions being smaller than the region. The image sensor is also to receive optical signals from the re-illumination for determining depth profile information within the one or more regions.

Expanding our portfolio

To support the needs of Generative AI centric enterprise development

Google Cloud Foundation Models

Across a variety of model sizes to address use cases

PaLM for Text

Custom language tasks

PaLM for Chat

Multi-turn conversations with session context

Imagen for Text to Image

Create and edit images from simple prompts

Embeddings API for Text and Image

Extract semantic information from unstructured data

Chirp for Speech to Text

Build voice enabled applications

Codey for Code Generation

Improve coding and debugging

The future of customer experience

Enhanced conversational capabilities and easier chatbot development

Section 04

LLMs vs. virtual agents

LLMs are characterized by **emergent abilities**, or the ability to perform tasks that were not included in their training examples.

LLMs contextual understanding of human language **changes how we interact** with data and intelligent systems.

LLMs can find patterns and connections in **massive, disparate data corpora**.
